TASKFORGE HACKATHON · 2026

Spoonful

Plan your day by energy, not by hours.

[Your name] · waazy-w.github.io/spoonful

THE PROBLEM

Every to-do app assumes you have the same energy every day.

For students with chronic illness, ADHD or depression, that isn’t true. On a bad day, the list doesn’t shrink. It turns into guilt.

WHO IT'S FOR

One user. One barrier. One change.

THE USER

A student whose energy changes from day to day.

THE BARRIER

Tools measure time, not energy. Every day is treated the same.

THE CHANGE

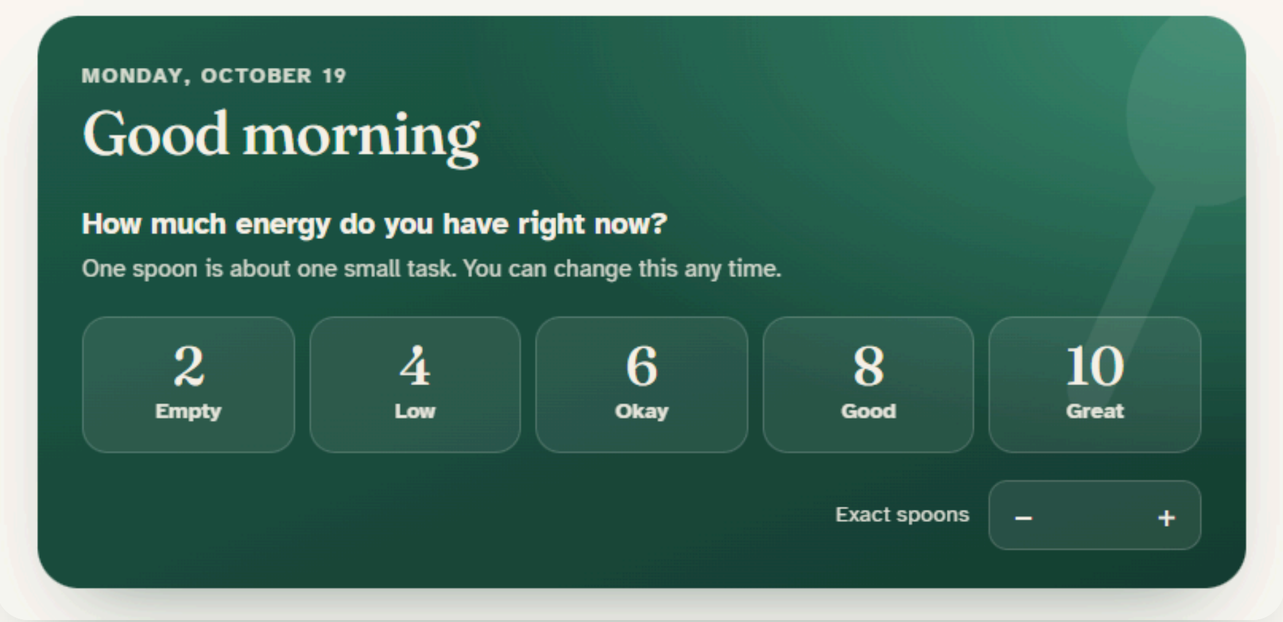

A plan that fits today, a clear first step, and permission for the rest to wait.

STEP 1 · CHECK IN

It starts with one question.

“How much energy do you have right now?”

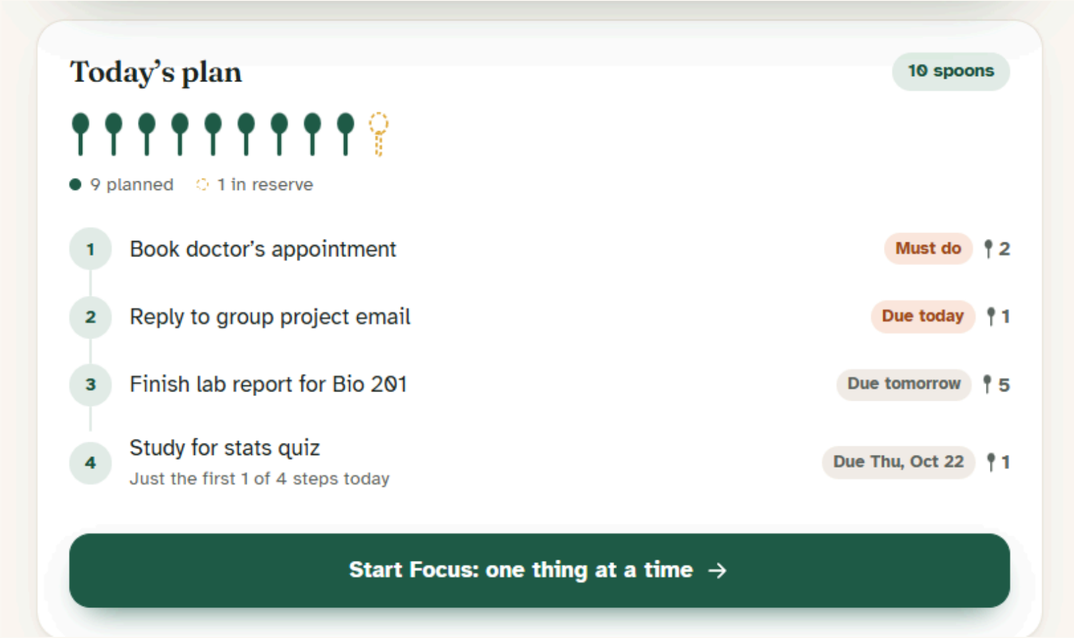

Spoon theory: you get a limited number of spoons each day, and every task costs some.

STEP 2 · GET A PLAN THAT FITS

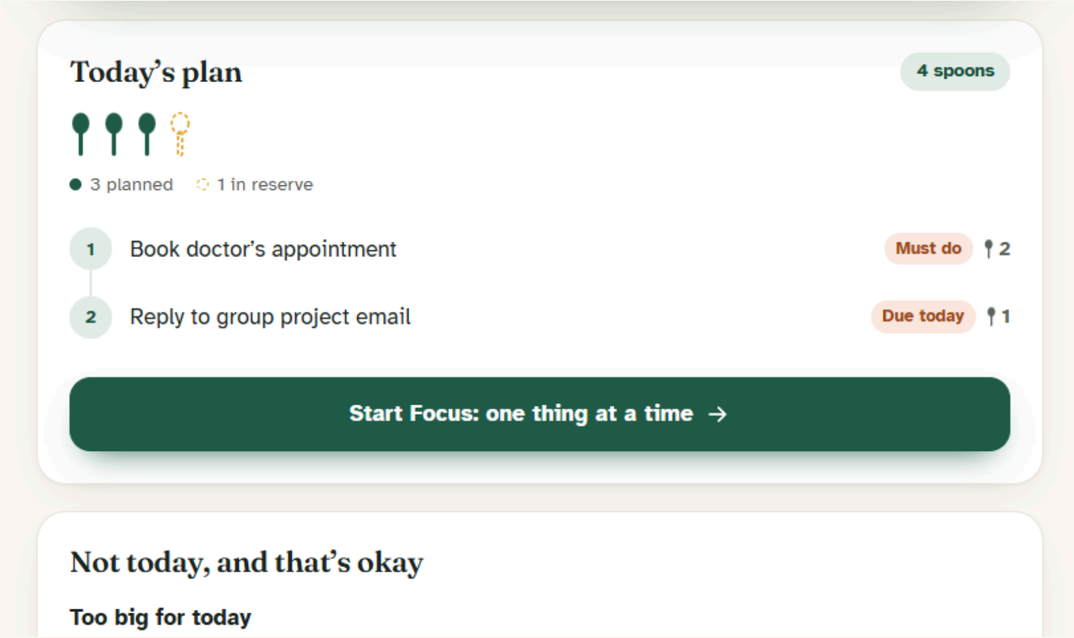

Same list. Different day.

Great day · 10 spoons

Deadlines first, 1 spoon kept in reserve.

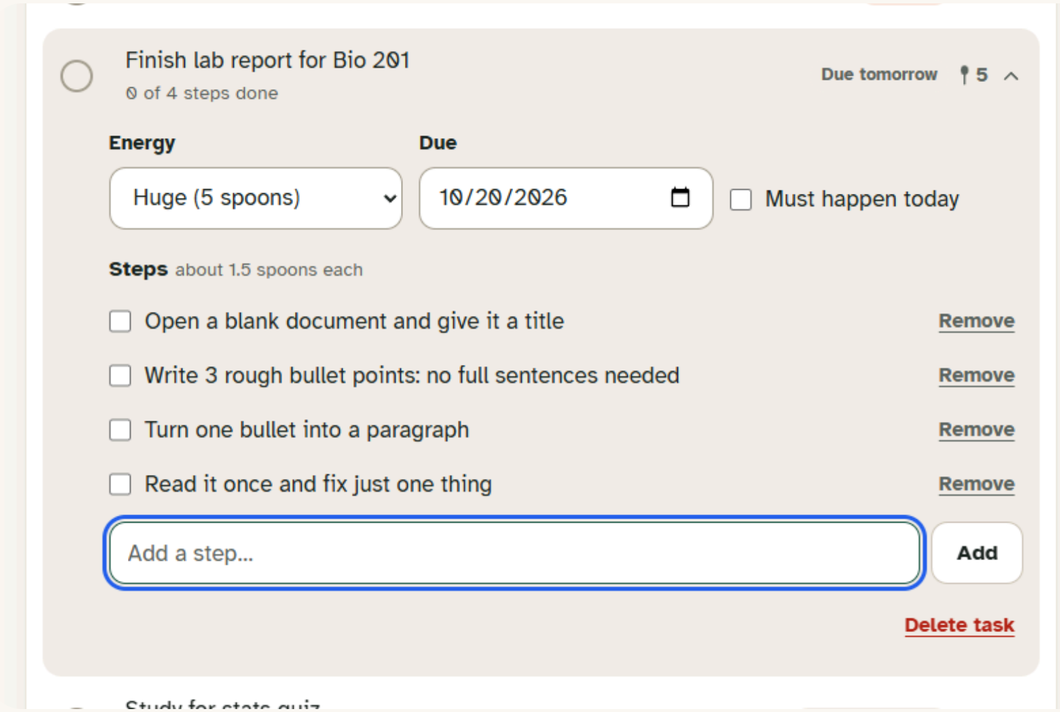

Rough day · 4 spoons

Two things fit. The rest waits, kindly.

STEP 3 · BREAK IT DOWN

Too big for today? Make a start anyway.

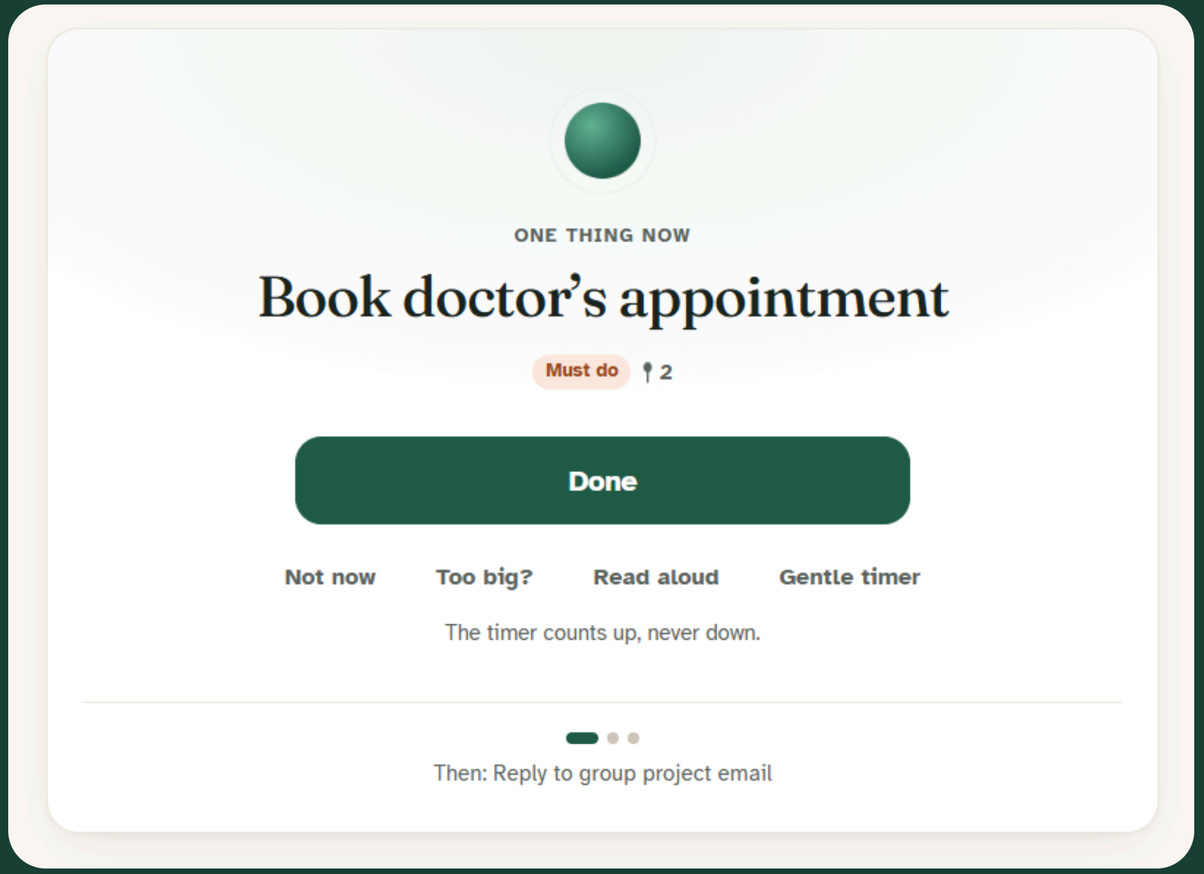

1. A 5-spoon task never fits a low day.
2. Built-in suggestions split it into small steps. Offline, no AI.
3. Spoonful plans just the first step that fits. The deadline still moves.

STEP 4 · FOCUS

One thing at a time.

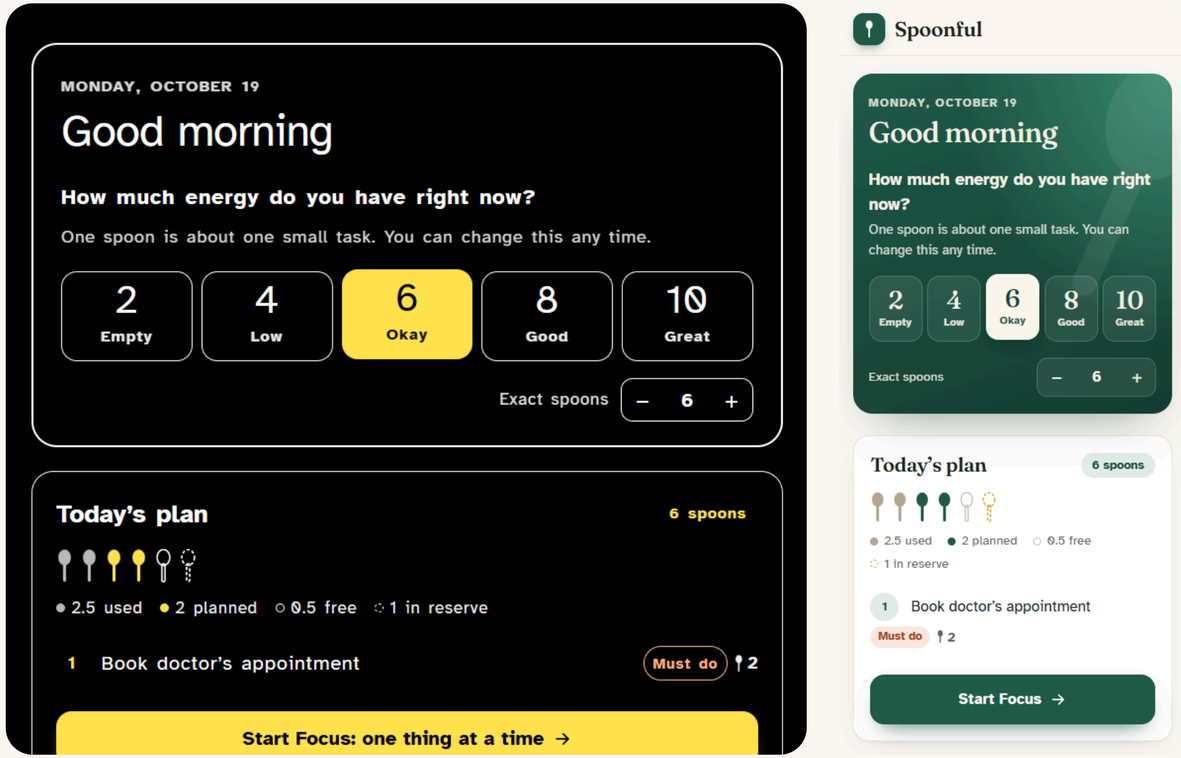

Done Not now Too big? Read aloud

A gentle timer counts up, never down. No pressure.

BUILT FOR EVERYONE

Accessibility is the feature.

- Large text and dyslexia-friendly spacing
- High contrast and dark mode
- Full keyboard and screen-reader support
- Works on any phone, and offline

Automated WCAG 2.1 AA check: 0 violations

UNDER THE HOOD

Small, tested and private.

16

unit tests on the planning engine

0

accessibility violations across 6 app states

0

servers or accounts. It works offline.
